IN THE SPECIFICATION

Please amend the specification as follows:

At page 15, the paragraph starting at line 20, please amend as follows:

In addition, ~~the~~ each data stream splitter ~~manager~~ may include a buffer **470** of data from the data stream. This buffer **470** may store, for example, a predetermined amount of data obtained from the data stream for a past predetermined period of time. For example, the buffer **470** may store data obtained from the data stream for the past minute of session time. When a new client device joins the session, the new client device may be provided with this buffered data to provide a context by which the new client device can being joining in the session. The data in the buffer **470** may be continuously updated when the buffer **470** becomes full. Thereby, old data in the buffer **470** is cycled out, e.g., overwritten, when new data is received.
